1 Introduction

1.1 Background and Motivation

Proposal: Discuss your motivations and reasons for choosing this project, especially any background or research interests that may have influenced your decision. Who will use or be interested in this AI model (i.e., users)? What kind of tasks will they want to do? [max 200 words]

1.2 Project Objectives
Proposal: Provide the primary questions you are trying to answer with your project. What would you like to learn and accomplish? List the benefits to you and the users of the completed AI model. [max 200 words]

1.3 Project Schedule
Proposal: Make sure you plan your work to avoid a big rush right before the final project deadline. Give a project schedule for weekly achievements (Week 7 to Week 12). Break down the activities among team members.

2 Data

2.1 Data Source
Proposal: Briefly summarise your data. If this is from the provided dataset, you need to provide your own understanding of this dataset. [max 200 words]

2.2 Data Processing
Proposal: Do you expect to do substantial data cleanup/pre-processing/labelling? How are you going to address this? [max 50 words]

3 Requirements
3.1 Must-Have Functionalities/Features
Proposal: The functionalities/features without which you would consider your project a failure.

3.2 Optional Features
Proposal: The functionalities/features you consider would be nice but not critical.
